

**Smart-e (UK) Ltd
Environmental Policy**

- We comply with, and often exceed, all relevant environmental and recycling legislation and ensure environmental policies are considered during the design and manufacture of new products.
- Where possible, materials and packaging are recyclable. For example, all enclosures are manufactured from recyclable aluminium, whilst administration paperwork is sent electronically to reduce paper usage.
- Power supplies at our premises are selected for their efficiency, and low impact on the environment, with wide use of low-energy bulbs.
- Our staff adhere to a strict environmental policy which is regularly audited to improve procedures and are encouraged to cycle and walk to work where practical.
- Smart-e's sub-contractors are encouraged to adhere to our environmental policy and are selected within a 50-mile radius of our premises to reduce the environmental impact of transit.
